

NE542 Dual Low-Noise Preamplifier

Product Specification

Linear Products

DESCRIPTION

The NE542 is a dual preamplifier for the amplification of low level signals in applications requiring optimum noise performance. Each of the two amplifiers is completely independent, with individual internal power supply decoupler-regulator, providing 110dB supply rejection and 70dB channel separation. Other outstanding features include high gain (104dB), large output voltage swing ($V_{CC}-2V_{P-P}$), and internal compensation to 10dB. The NE542 operates from a single supply across a range of 9 to 24V.

The NE542 is ideal for use in stereo phono, tape, or microphone preamps and other applications requiring low noise amplification of small signals.
